Nutritious:

Soft, delicious eggs are easy to chew and digest, making them suitable for people of all ages. Containing some of the highest quality protein available in a food, eggs also provide a wide variety of other nutrients at a cost of 70 calories per Large egg. Because they have a high nutrient content compared to their calorie count, eggs are nutrient-dense. This makes them especially helpful as a nutritious part of toddler and senior diets as well as diets for the weight conscious. Eggs also have a number of nutrients important for good health. Egg yolks contain lutein and zeaxanthin which contributes to health of the eye. The choline found in eggs plays a role in brain function. Both the egg white and yolk provide protein plus assorted amounts of all needed vitamins, except vitamin C, and an array of important minerals. Altogether, these nutrients maintain your body, repair tissues and ensure that body processes all function properly. For 140 calories, a serving of two delicious, nutritious eggs provide all the following.

Egg yolks are a concentrated source of dietary cholesterol and considered a medium-fat food. A large egg yolk has a total of 5 grams of fat, most of which is the unsaturated type. However, egg whites are cholesterol-free and fat-free. Studies show that saturated fats play the most critical role in raising blood cholesterol levels. In recent studies, adding two eggs to a healthful diet did not significantly increase blood cholesterol levels in men or women, young or middle-aged, with either normal or moderately elevated blood cholesterol levels.

Affordable:

You would naturally expect to pay a high price for something so tasty and nutritious. The fact is, eggs are a readily affordable source of all this goodness. The highest quality protein in the supermarket just happens to be the most affordable. If a dozen eggs cost \$1.00, then you are paying only 67¢ a pound for the gold standard of protein. To compare eggs to other protein foods, remember that a dozen Large eggs weigh 1-1/2 pounds; 2/3 of the price per dozen equal the price per pound. Despite the common belief that all egg protein is found in egg white, actually, 45% of protein is found in egg yolk and remaining 55% is in the egg white.
